What is a Digital Business Card?

iEdge is the modern way to share contact information and promote your brand. In our hybrid work environment, iEdge makes you look good in both in-person or virtual meetings. Digital business cards, also referred to as virtual or electronic cards, are shareable using any social media channel, SMS, Whatsapp, email, QR code or if you may as a physical paper or NFC card. It opens a door for your contacts into your products, services to create customer engagement and quick sales closures. It's an inexpensive tool that helps digitize your enterprise at all levels, making employees happier and giving them a chance to be brand ambassadors.

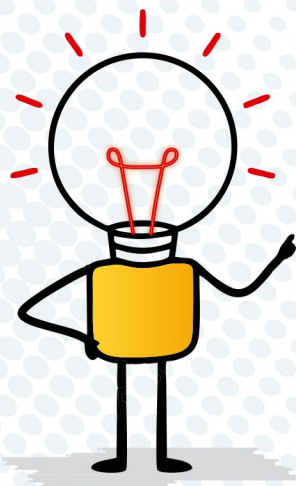

Why switch to Digital Business Card?

Studies have revealed that within a week, **88%** of paper cards go in a bin. Which means losing potential business.

Moreover, with a paper card: **You can only add limited information** **Must reprint** to update the card details **Can be shared only through an in-person meeting** **Not contribute to the environment**

Take your business Anywhere and Everywhere with **Digital Business Cards**

More Amazing features
